<b>Preface</b> .....	VII
Motivation .....	VII
Aims, Readership and Book Structure .....	XII
Final Word and Acknowledgments .....	XIV
Description of Contents by Chapter .....	XIX
<b>Abbreviations and Notation</b> .....	XXXV

---

## Part I. BASIC DEFINITIONS AND NO ARBITRAGE

---

<b>1. Definitions and Notation</b> .....	1
1.1 The Bank Account and the Short Rate .....	2
1.2 Zero-Coupon Bonds and Spot Interest Rates .....	4
1.3 Fundamental Interest-Rate Curves .....	9
1.4 Forward Rates .....	11
1.5 Interest-Rate Swaps and Forward Swap Rates .....	13
1.6 Interest-Rate Caps/Floors and Swaptions .....	16
<b>2. No-Arbitrage Pricing and Numeraire Change</b> .....	23
2.1 No-Arbitrage in Continuous Time .....	24
2.2 The Change-of-Numeraire Technique .....	26
2.3 A Change of Numeraire Toolkit (Brigo & Mercurio 2001c) .....	28
2.3.1 A helpful notation: “DC” .....	35
2.4 The Choice of a Convenient Numeraire .....	37
2.5 The Forward Measure .....	38
2.6 The Fundamental Pricing Formulas .....	39
2.6.1 The Pricing of Caps and Floors .....	40
2.7 Pricing Claims with Deferred Payoffs .....	42
2.8 Pricing Claims with Multiple Payoffs .....	42
2.9 Foreign Markets and Numeraire Change .....	44

---

**Part II. FROM SHORT RATE MODELS TO HJM**

---

<b>3. One-factor short-rate models</b>	51
3.1 Introduction and Guided Tour	51
3.2 Classical Time-Homogeneous Short-Rate Models	57
3.2.1 The Vasicek Model	58
3.2.2 The Dothan Model	62
3.2.3 The Cox, Ingersoll and Ross (CIR) Model	64
3.2.4 Affine Term-Structure Models	68
3.2.5 The Exponential-Vasicek (EV) Model	70
3.3 The Hull-White Extended Vasicek Model	71
3.3.1 The Short-Rate Dynamics	72
3.3.2 Bond and Option Pricing	74
3.3.3 The Construction of a Trinomial Tree	78
3.4 Possible Extensions of the CIR Model	80
3.5 The Black-Karasinski Model	82
3.5.1 The Short-Rate Dynamics	83
3.5.2 The Construction of a Trinomial Tree	84
3.6 Volatility Structures in One-Factor Short-Rate Models	87
3.7 Humped-Volatility Short-Rate Models	92
3.8 A General Deterministic-Shift Extension	95
3.8.1 The Basic Assumptions	96
3.8.2 Fitting the Initial Term Structure of Interest Rates	97
3.8.3 Explicit Formulas for European Options	99
3.8.4 The Vasicek Case	100
3.9 The CIR++ Model	102
3.9.1 The Construction of a Trinomial Tree	105
3.9.2 Early Exercise Pricing via Dynamic Programming	106
3.9.3 The Positivity of Rates and Fitting Quality	106
3.9.4 Monte Carlo Simulation	109
3.9.5 Jump Diffusion CIR and CIR++ models (JCIR, JCIR++)	109
3.10 Deterministic-Shift Extension of Lognormal Models	110
3.11 Some Further Remarks on Derivatives Pricing	112
3.11.1 Pricing European Options on a Coupon-Bearing Bond	112
3.11.2 The Monte Carlo Simulation	114
3.11.3 Pricing Early-Exercise Derivatives with a Tree	116
3.11.4 A Fundamental Case of Early Exercise: Bermudan-Style Swaptions	121
3.12 Implied Cap Volatility Curves	124
3.12.1 The Black and Karasinski Model	125
3.12.2 The CIR++ Model	126
3.12.3 The Extended Exponential-Vasicek Model	128
3.13 Implied Swaption Volatility Surfaces	129
3.13.1 The Black and Karasinski Model	130

3.13.2	The Extended Exponential-Vasicek Model . . . . .	131
3.14	An Example of Calibration to Real-Market Data . . . . .	132
<b>4.</b>	<b>Two-Factor Short-Rate Models . . . . .</b>	<b>137</b>
4.1	Introduction and Motivation . . . . .	137
4.2	The Two-Additive-Factor Gaussian Model G2++ . . . . .	142
4.2.1	The Short-Rate Dynamics . . . . .	143
4.2.2	The Pricing of a Zero-Coupon Bond . . . . .	144
4.2.3	Volatility and Correlation Structures in Two-Factor Models . . . . .	148
4.2.4	The Pricing of a European Option on a Zero-Coupon Bond . . . . .	153
4.2.5	The Analogy with the Hull-White Two-Factor Model .	159
4.2.6	The Construction of an Approximating Binomial Tree.	162
4.2.7	Examples of Calibration to Real-Market Data . . . . .	166
4.3	The Two-Additive-Factor Extended CIR/LS Model CIR2++	175
4.3.1	The Basic Two-Factor CIR2 Model . . . . .	176
4.3.2	Relationship with the Longstaff and Schwartz Model (LS) . . . . .	177
4.3.3	Forward-Measure Dynamics and Option Pricing for CIR2 . . . . .	178
4.3.4	The CIR2++ Model and Option Pricing . . . . .	179
<b>5.</b>	<b>The Heath-Jarrow-Morton (HJM) Framework . . . . .</b>	<b>183</b>
5.1	The HJM Forward-Rate Dynamics . . . . .	185
5.2	Markovianity of the Short-Rate Process . . . . .	186
5.3	The Ritchken and Sankarasubramanian Framework . . . . .	187
5.4	The Mercurio and Moraleda Model . . . . .	191

---

## Part III. MARKET MODELS

---

<b>6.</b>	<b>The LIBOR and Swap Market Models (LFM and LSM) . .</b>	<b>195</b>
6.1	Introduction . . . . .	195
6.2	Market Models: a Guided Tour . . . . .	196
6.3	The Lognormal Forward-LIBOR Model (LFM) . . . . .	207
6.3.1	Some Specifications of the Instantaneous Volatility of Forward Rates . . . . .	210
6.3.2	Forward-Rate Dynamics under Different Numeraires . .	213
6.4	Calibration of the LFM to Caps and Floors Prices . . . . .	220
6.4.1	Piecewise-Constant Instantaneous-Volatility Structures	223
6.4.2	Parametric Volatility Structures . . . . .	224
6.4.3	Cap Quotes in the Market . . . . .	225
6.5	The Term Structure of Volatility . . . . .	226
6.5.1	Piecewise-Constant Instantaneous Volatility Structures	228

6.5.2	Parametric Volatility Structures . . . . .	231
6.6	Instantaneous Correlation and Terminal Correlation . . . . .	234
6.7	Swaptions and the Lognormal Forward-Swap Model (LSM) . . . . .	237
6.7.1	Swaptions Hedging . . . . .	241
6.7.2	Cash-Settled Swaptions . . . . .	243
6.8	Incompatibility between the LFM and the LSM . . . . .	244
6.9	The Structure of Instantaneous Correlations . . . . .	246
6.9.1	Some convenient full rank parameterizations . . . . .	248
6.9.2	Reduced-rank formulations: Rebonato’s angles and eigen- values zeroing . . . . .	250
6.9.3	Reducing the angles . . . . .	259
6.10	Monte Carlo Pricing of Swaptions with the LFM . . . . .	264
6.11	Monte Carlo Standard Error . . . . .	266
6.12	Monte Carlo Variance Reduction: Control Variate Estimator . . . . .	269
6.13	Rank-One Analytical Swaption Prices . . . . .	271
6.14	Rank- $r$ Analytical Swaption Prices . . . . .	277
6.15	A Simpler LFM Formula for Swaptions Volatilities . . . . .	281
6.16	A Formula for Terminal Correlations of Forward Rates . . . . .	284
6.17	Calibration to Swaptions Prices . . . . .	287
6.18	Instantaneous Correlations: Inputs (Historical Estimation) or Outputs (Fitting Parameters)? . . . . .	290
6.19	The exogenous correlation matrix . . . . .	291
6.19.1	Historical Estimation . . . . .	292
6.19.2	Pivot matrices . . . . .	295
6.20	Connecting Caplet and $S \times 1$ -Swaption Volatilities . . . . .	300
6.21	Forward and Spot Rates over Non-Standard Periods . . . . .	307
6.21.1	Drift Interpolation . . . . .	308
6.21.2	The Bridging Technique . . . . .	310
<b>7.</b>	<b>Cases of Calibration of the LIBOR Market Model . . . . .</b>	<b>313</b>
7.1	Inputs for the First Cases . . . . .	315
7.2	Joint Calibration with Piecewise-Constant Volatilities as in TABLE 5 . . . . .	315
7.3	Joint Calibration with Parameterized Volatilities as in For- mulation 7 . . . . .	319
7.4	Exact Swaptions “Cascade” Calibration with Volatilities as in TABLE 1 . . . . .	322
7.4.1	Some Numerical Results . . . . .	330
7.5	A Pause for Thought . . . . .	337
7.5.1	First summary . . . . .	337
7.5.2	An automatic fast analytical calibration of LFM to swaptions. Motivations and plan . . . . .	338
7.6	Further Numerical Studies on the Cascade Calibration Algo- rithm . . . . .	340

7.6.1	Cascade Calibration under Various Correlations and Ranks . . . . .	341
7.6.2	Cascade Calibration Diagnostics: Terminal Correlation and Evolution of Volatilities . . . . .	346
7.6.3	The interpolation for the swaption matrix and its impact on the CCA . . . . .	349
7.7	Empirically efficient Cascade Calibration . . . . .	351
7.7.1	CCA with Endogenous Interpolation and Based Only on Pure Market Data . . . . .	352
7.7.2	Financial Diagnostics of the RCCAEI test results . . . . .	359
7.7.3	Endogenous Cascade Interpolation for missing swaptions volatilities quotes . . . . .	364
7.7.4	A first partial check on the calibrated $\sigma$ parameters stability . . . . .	364
7.8	Reliability: Monte Carlo tests . . . . .	366
7.9	Cascade Calibration and the cap market . . . . .	369
7.10	Cascade Calibration: Conclusions . . . . .	372
<b>8.</b>	<b>Monte Carlo Tests for LFM Analytical Approximations . . . . .</b>	<b>377</b>
8.1	First Part. Tests Based on the Kullback Leibler Information (KLI) . . . . .	378
8.1.1	Distance between distributions: The Kullback Leibler information . . . . .	378
8.1.2	Distance of the LFM swap rate from the lognormal family of distributions . . . . .	381
8.1.3	Monte Carlo tests for measuring KLI . . . . .	384
8.1.4	Conclusions on the KLI-based approach . . . . .	391
8.2	Second Part: Classical Tests . . . . .	392
8.3	The “Testing Plan” for Volatilities . . . . .	392
8.4	Test Results for Volatilities . . . . .	396
8.4.1	Case (1): Constant Instantaneous Volatilities . . . . .	396
8.4.2	Case (2): Volatilities as Functions of Time to Maturity . . . . .	401
8.4.3	Case (3): Humped and Maturity-Adjusted Instantaneous Volatilities Depending only on Time to Maturity . . . . .	410
8.5	The “Testing Plan” for Terminal Correlations . . . . .	421
8.6	Test Results for Terminal Correlations . . . . .	427
8.6.1	Case (i): Humped and Maturity-Adjusted Instantaneous Volatilities Depending only on Time to Maturity, Typical Rank-Two Correlations . . . . .	427
8.6.2	Case (ii): Constant Instantaneous Volatilities, Typical Rank-Two Correlations . . . . .	430
8.6.3	Case (iii): Humped and Maturity-Adjusted Instantaneous Volatilities Depending only on Time to Maturity, Some Negative Rank-Two Correlations . . . . .	432

8.6.4	Case (iv): Constant Instantaneous Volatilities, Some Negative Rank-Two Correlations.....	438
8.6.5	Case (v): Constant Instantaneous Volatilities, Perfect Correlations, Upwardly Shifted $\Phi$ 's .....	439
8.7	Test Results: Stylized Conclusions .....	442

---

**Part IV. THE VOLATILITY SMILE**

---

<b>9.</b>	<b>Including the Smile in the LFM .....</b>	<b>447</b>
9.1	A Mini-tour on the Smile Problem .....	447
9.2	Modeling the Smile .....	450
<b>10.</b>	<b>Local-Volatility Models .....</b>	<b>453</b>
10.1	The Shifted-Lognormal Model .....	454
10.2	The Constant Elasticity of Variance Model .....	456
10.3	A Class of Analytically-Tractable Models .....	459
10.4	A Lognormal-Mixture (LM) Model .....	463
10.5	Forward Rates Dynamics under Different Measures .....	467
10.5.1	Decorrelation Between Underlying and Volatility .....	469
10.6	Shifting the LM Dynamics .....	469
10.7	A Lognormal-Mixture with Different Means (LMDM) .....	471
10.8	The Case of Hyperbolic-Sine Processes .....	473
10.9	Testing the Above Mixture-Models on Market Data .....	475
10.10A	Second General Class .....	478
10.11A	Particular Case: a Mixture of GBM's .....	483
10.12A	An Extension of the GBM Mixture Model Allowing for Implied Volatility Skews .....	486
10.13A	General Dynamics à la Dupire (1994) .....	489
<b>11.</b>	<b>Stochastic-Volatility Models .....</b>	<b>495</b>
11.1	The Andersen and Brotherton-Ratcliffe (2001) Model .....	497
11.2	The Wu and Zhang (2002) Model.....	501
11.3	The Piterbarg (2003) Model .....	504
11.4	The Hagan, Kumar, Lesniewski and Woodward (2002) Model	508
11.5	The Joshi and Rebonato (2003) Model .....	513
<b>12.</b>	<b>Uncertain-Parameter Models .....</b>	<b>517</b>
12.1	The Shifted-Lognormal Model with Uncertain Parameters (SLMUP) .....	519
12.1.1	Relationship with the Lognormal-Mixture LVM .....	520
12.2	Calibration to Caplets .....	520
12.3	Swaption Pricing .....	522
12.4	Monte-Carlo Swaption Pricing .....	524
12.5	Calibration to Swaptions .....	526

12.6 Calibration to Market Data . . . . .	528
12.7 Testing the Approximation for Swaptions Prices . . . . .	530
12.8 Further Model Implications . . . . .	535
12.9 Joint Calibration to Caps and Swaptions . . . . .	539

---

**Part V. EXAMPLES OF MARKET PAYOFFS**

---

<b>13. Pricing Derivatives on a Single Interest-Rate Curve . . . . .</b>	<b>547</b>
13.1 In-Arrears Swaps . . . . .	548
13.2 In-Arrears Caps . . . . .	550
13.2.1 A First Analytical Formula (LFM) . . . . .	550
13.2.2 A Second Analytical Formula (G2++) . . . . .	550
13.3 Autocaps . . . . .	551
13.4 Caps with Deferred Caplets . . . . .	552
13.4.1 A First Analytical Formula (LFM) . . . . .	552
13.4.2 A Second Analytical Formula (G2++) . . . . .	553
13.5 Ratchet Caps and Floors . . . . .	554
13.5.1 Analytical Approximation for Ratchet Caps with the LFM . . . . .	555
13.6 Ratchets (One-Way Floaters) . . . . .	556
13.7 Constant-Maturity Swaps (CMS) . . . . .	557
13.7.1 CMS with the LFM . . . . .	557
13.7.2 CMS with the G2++ Model . . . . .	559
13.8 The Convexity Adjustment and Applications to CMS . . . . .	559
13.8.1 Natural and Unnatural Time Lags . . . . .	559
13.8.2 The Convexity-Adjustment Technique . . . . .	561
13.8.3 Deducing a Simple Lognormal Dynamics from the Ad- justment . . . . .	565
13.8.4 Application to CMS . . . . .	565
13.8.5 Forward Rate Resetting Unnaturally and Average- Rate Swaps . . . . .	566
13.9 Average Rate Caps . . . . .	568
13.10 Caps and Floortions . . . . .	570
13.11 Zero-Coupon Swaptions . . . . .	571
13.12 Eurodollar Futures . . . . .	575
13.12.1 The Shifted Two-Factor Vasicek G2++ Model . . . . .	576
13.12.2 Eurodollar Futures with the LFM . . . . .	577
13.13 LFM Pricing with “In-Between” Spot Rates . . . . .	578
13.13.1 Accrual Swaps . . . . .	579
13.13.2 Trigger Swaps . . . . .	582
13.14 LFM Pricing with Early Exercise and Possible Path Dependence	584
13.15 LFM: Pricing Bermudan Swaptions . . . . .	588
13.15.1 Least Squared Monte Carlo Approach . . . . .	589
13.15.2 Carr and Yang’s Approach . . . . .	591

13.15.3	Andersen's Approach	592
13.15.4	Numerical Example	595
13.16	New Generation of Contracts	601
13.16.1	Target Redemption Notes	602
13.16.2	CMS Spread Options	603
<b>14.</b>	<b>Pricing Derivatives on Two Interest-Rate Curves</b>	<b>607</b>
14.1	The Attractive Features of G2++ for Multi-Curve Payoffs	608
14.1.1	The Model	608
14.1.2	Interaction Between Models of the Two Curves "1" and "2"	610
14.1.3	The Two-Models Dynamics under a Unique Convenient Forward Measure	611
14.2	Quanto Constant-Maturity Swaps	613
14.2.1	Quanto CMS: The Contract	613
14.2.2	Quanto CMS: The G2++ Model	615
14.2.3	Quanto CMS: Quanto Adjustment	621
14.3	Differential Swaps	623
14.3.1	The Contract	623
14.3.2	Differential Swaps with the G2++ Model	624
14.3.3	A Market-Like Formula	626
14.4	Market Formulas for Basic Quanto Derivatives	626
14.4.1	The Pricing of Quanto Caplets/Floorlets	627
14.4.2	The Pricing of Quanto Caps/Floors	628
14.4.3	The Pricing of Differential Swaps	629
14.4.4	The Pricing of Quanto Swaptions	630
14.5	Pricing of Options on two Currency LIBOR Rates	633
14.5.1	Spread Options	635
14.5.2	Options on the Product	637
14.5.3	Trigger Swaps	638
14.5.4	Dealing with Multiple Dates	639

---

**Part VI. INFLATION**

---

<b>15.</b>	<b>Pricing of Inflation-Indexed Derivatives</b>	<b>643</b>
15.1	The Foreign-Currency Analogy	644
15.2	Definitions and Notation	645
15.3	The JY Model	646
<b>16.</b>	<b>Inflation-Indexed Swaps</b>	<b>649</b>
16.1	Pricing of a ZCIIS	649
16.2	Pricing of a YYIIS	651
16.3	Pricing of a YYIIS with the JY Model	652
16.4	Pricing of a YYIIS with a First Market Model	654

16.5 Pricing of a YYIIS with a Second Market Model .....	657
<b>17. Inflation-Indexed Caplets/Floorlets .....</b>	<b>661</b>
17.1 Pricing with the JY Model .....	661
17.2 Pricing with the Second Market Model .....	663
17.3 Inflation-Indexed Caps .....	665
<b>18. Calibration to market data .....</b>	<b>669</b>
<b>19. Introducing Stochastic Volatility .....</b>	<b>673</b>
19.1 Modelling Forward CPI's with Stochastic Volatility .....	674
19.2 Pricing Formulae .....	676
19.2.1 Exact Solution for the Uncorrelated Case .....	677
19.2.2 Approximated Dynamics for Non-zero Correlations ...	680
19.3 Example of Calibration .....	681
<b>20. Pricing Hybrids with an Inflation Component .....</b>	<b>689</b>
20.1 A Simple Hybrid Payoff .....	689

---

**Part VII. CREDIT**

---

<b>21. Introduction and Pricing under Counterparty Risk .....</b>	<b>695</b>
21.1 Introduction and Guided Tour .....	696
21.1.1 Reduced form (Intensity) models .....	697
21.1.2 CDS Options Market Models .....	699
21.1.3 Firm Value (or Structural) Models .....	702
21.1.4 Further Models .....	704
21.1.5 The Multi-name picture: FtD, CDO and Copula Func-	
tions .....	705
21.1.6 First to Default (FtD) Basket. ....	705
21.1.7 Collateralized Debt Obligation (CDO) Tranches. ....	707
21.1.8 Where can we introduce dependence? .....	708
21.1.9 Copula Functions. ....	710
21.1.10 Dynamic Loss models. ....	718
21.1.11 What data are available in the market? .....	719
21.2 Defaultable (corporate) zero coupon bonds .....	723
21.2.1 Defaultable (corporate) coupon bonds .....	724
21.3 Credit Default Swaps and Defaultable Floaters .....	724
21.3.1 CDS payoffs: Different Formulations .....	725
21.3.2 CDS pricing formulas .....	727
21.3.3 Changing filtration: $\mathcal{F}_t$ without default VS complete	
$\mathcal{G}_t$ .....	728
21.3.4 CDS forward rates: The first definition .....	730

21.3.5	Market quotes, model independent implied survival probabilities and implied hazard functions . . . . .	731
21.3.6	A simpler formula for calibrating intensity to a single CDS . . . . .	735
21.3.7	Different Definitions of CDS Forward Rates and Analogies with the LIBOR and SWAP rates . . . . .	737
21.3.8	Defaultable Floater and CDS . . . . .	739
21.4	CDS Options and Callable Defaultable Floaters . . . . .	743
21.5	Constant Maturity CDS . . . . .	744
21.5.1	Some interesting Financial features of CMCDS . . . . .	745
21.6	Interest-Rate Payoffs with Counterparty Risk . . . . .	747
21.6.1	General Valuation of Counterparty Risk . . . . .	748
21.6.2	Counterparty Risk in single Interest Rate Swaps (IRS) . . . . .	750
<b>22.</b>	<b>Intensity Models . . . . .</b>	<b>757</b>
22.1	Introduction and Chapter Description . . . . .	757
22.2	Poisson processes . . . . .	759
22.2.1	Time homogeneous Poisson processes . . . . .	760
22.2.2	Time inhomogeneous Poisson Processes . . . . .	761
22.2.3	Cox Processes . . . . .	763
22.3	CDS Calibration and Implied Hazard Rates/ Intensities . . . . .	764
22.4	Inducing dependence between Interest-rates and the default event . . . . .	779
22.5	The Filtration Switching Formula: Pricing under partial information . . . . .	780
22.6	Default Simulation in reduced form models . . . . .	781
22.6.1	Standard error . . . . .	784
22.6.2	Variance Reduction with Control Variate . . . . .	786
22.7	Stochastic Intensity: The SSRD model . . . . .	788
22.7.1	A two-factor shifted square-root diffusion model for intensity and interest rates (Brigo and Alfonsi (2003)). . . . .	789
22.7.2	Calibrating the joint stochastic model to CDS: Separability . . . . .	792
22.7.3	Discretization schemes for simulating $(\lambda, r)$ . . . . .	800
22.7.4	Study of the convergence of the discretization schemes for simulating CIR processes (Alfonsi (2005)) . . . . .	804
22.7.5	Gaussian dependence mapping: A tractable approximated SSRD . . . . .	815
22.7.6	Numerical Tests: Gaussian Mapping and Correlation Impact . . . . .	818
22.7.7	The impact of correlation on a few “test payoffs” . . . . .	820
22.7.8	A pricing example: A Cancellable Structure . . . . .	821
22.7.9	CDS Options and Jamshidian’s Decomposition . . . . .	823
22.7.10	Bermudan CDS Options . . . . .	833

22.8 Stochastic diffusion intensity is not enough: Adding jumps.	
The JCIR(++) Model . . . . .	833
22.8.1 The jump-diffusion CIR model (JCIR) . . . . .	834
22.8.2 Bond (or Survival Probability) Formula. . . . .	835
22.8.3 Exact calibration of CDS: The JCIR++ model . . . . .	836
22.8.4 Simulation. . . . .	836
22.8.5 Jamshidian's Decomposition. . . . .	837
22.8.6 Attaining high levels of CDS implied volatility . . . . .	839
22.8.7 JCIR(++) models as a multi-name possibility . . . . .	840
22.9 Conclusions and further research . . . . .	841
<b>23. CDS Options Market Models . . . . .</b>	<b>843</b>
23.1 CDS Options and Callable Defaultable Floaters . . . . .	846
23.1.1 Once-callable defaultable floaters . . . . .	848
23.2 A market formula for CDS options and callable defaultable floaters . . . . .	849
23.2.1 Market formulas for CDS Options . . . . .	849
23.2.2 Market Formula for callable DFRN . . . . .	851
23.2.3 Examples of Implied Volatilities from the Market . . . . .	854
23.3 Towards a Completely Specified Market Model . . . . .	856
23.3.1 First Choice. One-period and two-period rates . . . . .	857
23.3.2 Second Choice: Co-terminal and one-period CDS rates market model . . . . .	862
23.3.3 Third choice. Approximation: One-period CDS rates dynamics . . . . .	863
23.4 Hints at Smile Modeling . . . . .	865
23.5 Constant Maturity Credit Default Swaps (CMCDS) with the market model . . . . .	866
23.5.1 CDS and Constant Maturity CDS . . . . .	866
23.5.2 Proof of the main result . . . . .	869
23.5.3 A few numerical examples . . . . .	871

**Part VIII. APPENDICES**

---

<b>A. Other Interest-Rate Models . . . . .</b>	<b>879</b>
A.1 Brennan and Schwartz's Model . . . . .	879
A.2 Balduzzi, Das, Foresi and Sundaram's Model . . . . .	880
A.3 Flesaker and Hughston's Model . . . . .	881
A.4 Rogers's Potential Approach . . . . .	883
A.5 Markov Functional Models . . . . .	883

<b>B. Pricing Equity Derivatives under Stochastic Rates</b> . . . . .	885
B.1 The Short Rate and Asset-Price Dynamics . . . . .	885
B.1.1 The Dynamics under the Forward Measure . . . . .	888
B.2 The Pricing of a European Option on the Given Asset . . . . .	890
B.3 A More General Model . . . . .	891
B.3.1 The Construction of an Approximating Tree for $r$ . . . . .	892
B.3.2 The Approximating Tree for $S$ . . . . .	894
B.3.3 The Two-Dimensional Tree . . . . .	895
<b>C. A Crash Intro to Stochastic Differential Equations and Poisson Processes</b> . . . . .	899
C.1 From Deterministic to Stochastic Differential Equations . . . . .	899
C.2 Ito's Formula . . . . .	906
C.3 Discretizing SDEs for Monte Carlo: Euler and Milstein Schemes	908
C.4 Examples . . . . .	910
C.5 Two Important Theorems . . . . .	912
C.6 A Crash Intro to Poisson Processes . . . . .	915
C.6.1 Time inhomogeneous Poisson Processes . . . . .	917
C.6.2 Doubly Stochastic Poisson Processes (or Cox Processes)	918
C.6.3 Compound Poisson processes . . . . .	919
C.6.4 Jump-diffusion Processes . . . . .	920
<b>D. A Useful Calculation</b> . . . . .	921
<b>E. A Second Useful Calculation</b> . . . . .	923
<b>F. Approximating Diffusions with Trees</b> . . . . .	927
<b>G. Trivia and Frequently Asked Questions</b> . . . . .	933
<b>H. Talking to the Traders</b> . . . . .	937
<b>References</b> . . . . .	953
